Document history and Status

Report by	BarrierBreak
Prepared for	ACME Inc.
Version	1.0

Detailed findings and recommendations

Findings are grouped based on WCAG 2.2 Guidelines and the related success criterion. For most of the issues mentioned below, few examples are included. Findings discussed in these examples need to be applied to rest of the website.

Accessibility Issues

ACC-001	Non-text content lacks text alternatives	High	1.1.1 Non-text Content
ACC-002	Insufficient color contrast on call-to-action buttons	Medium	1.4.3 Contrast (Minimum)
ACC-003	Form input fields lack programmatically associated labels	Critical	1.3.1 Info and Relationships

Issue ID ACC-001

Issue name	Non-text content lacks text alternatives
WCAG Success Criteria	1.1.1 Non-text Content
WCAG Conformance Level	A
IS 17802	IS-17802-1.1.1
GIGW 3.0	GIGW-1.1.1
Section 508	1194.22(a)
EN 301 549	9.1.1.1
Severity	High
Page	Homepage

Environments Failed On

Chrome / JAWS 2024; Firefox / NVDA 2024.1; Safari / VoiceOver

Actual Result

The hero banner image on the homepage lacks an alt attribute. Screen readers announce the image filename instead of meaningful descriptive text, preventing users who rely on assistive technology from understanding the banner content.

Expected Result

All non-text content must have a text alternative serving the same purpose. The hero banner should include an alt attribute with a concise description of the image content.

Recommendation

Add alt text describing the banner image content; For decorative images use alt='' with role='presentation'; Consider replacing image-as-text with CSS-styled HTML text

Issue ID ACC-002

Issue name	Insufficient color contrast on call-to-action buttons
WCAG Success Criteria	1.4.3 Contrast (Minimum)
WCAG Conformance Level	AA
IS 17802	IS-17802-1.4.3
GIGW 3.0	GIGW-1.4.3
Section 508	1194.21(g)
EN 301 549	9.1.4.3
Severity	Medium
Page	Products

Environments Failed On

Chrome / Color Contrast Analyzer; Firefox / Accessibility DevTools

Actual Result

Primary CTA buttons use light green text (#98FB98) on a white (#FFFFFF) background at 1.37:1 contrast ratio, far below the WCAG 2.2 AA minimum of 4.5:1 for normal text.

Expected Result

The visual presentation of text must have a contrast ratio of at least 4.5:1 for normal text and 3:1 for large text against adjacent colors.

Recommendation

Change button text color to #1B5E20 for 12.3:1 contrast; Add borders or icons alongside color to convey meaning; Run automated contrast audits on all UI components

Issue ID ACC-003

Issue name	Form input fields lack programmatically associated labels
WCAG Success Criteria	1.3.1 Info and Relationships
WCAG Conformance Level	A
IS 17802	IS-17802-1.3.1
GIGW 3.0	GIGW-1.3.1
Section 508	1194.22(n)
EN 301 549	9.1.3.1
Severity	Critical
Page	Contact Us

Environments Failed On

Chrome / JAWS 2024; Firefox / NVDA 2024.1

Actual Result

The Contact Us form uses placeholder attributes for visual labels without corresponding <label> elements. Screen readers cannot announce the purpose of each input, making the form unusable for blind users.

Expected Result

Each form input must have a programmatically associated label element so assistive technology can convey the input purpose to the user.

Recommendation

Add explicit <label for='name'>Name</label> elements with matching id attributes; Use aria-label or aria-labelledby when visual labels cannot be used; Associate error messages with inputs using aria-describedby
