Graphics Demo

This document demonstrates the rect and path template blocks for inline vector graphics within the flow layout system. Both filled and stroked shapes are supported.

Rect Block: A colored rectangle rendered inline with the text flow. Use this for section dividers, colored backgrounds, or callout regions.

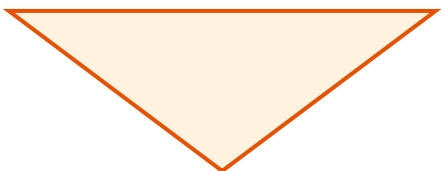
Triangle via Path Block

Path Block: A custom triangle shape drawn using moveTo, lineTo, and closePath commands. Path blocks support arbitrary vector geometry for diagrams and decorations.

Decorative Rectangles

Colored rect blocks can serve as visual accents. The example below shows three rect blocks with different fills used as inline decorations.

Green accent - suitable for success indicators or positive status tags.

Red accent - suitable for error indicators or negative status tags.


Yellow accent - suitable for warning indicators or pending status tags.
