Custom Blocks

This document demonstrates the custom template block type, which allows user-defined rendering logic via a callback that receives the PdfFlow layout engine. The render function must return the vertical height consumed.

Horizontal Rule Separator

The line below is drawn by a custom block using flow.rect() to create a thin filled rectangle as a visual separator:

The horizontal rule above separates sections cleanly without requiring image assets or external resources.

Watermark Text

Custom blocks can also render text. The watermark text below is rendered via a custom block using the flow layout engine:

DRAFT -- Confidential

The watermark text above is rendered as a custom block with centered alignment and light gray color, suitable for draft document markings.

Colored Divider

A thicker colored divider using flow.rect() with custom width and fill color:

Custom blocks give you complete control over inline PDF content rendering within the template flow system. Use flow.rect(), flow.path(), flow.textBlock(), and other PdfFlow methods.
